

Google OAuth Setup Guide

From Project Creation to Client ID Issuance

A step-by-step walkthrough of the Google Cloud Console setup required to connect the YouTube Data API v3.

CONTENTS

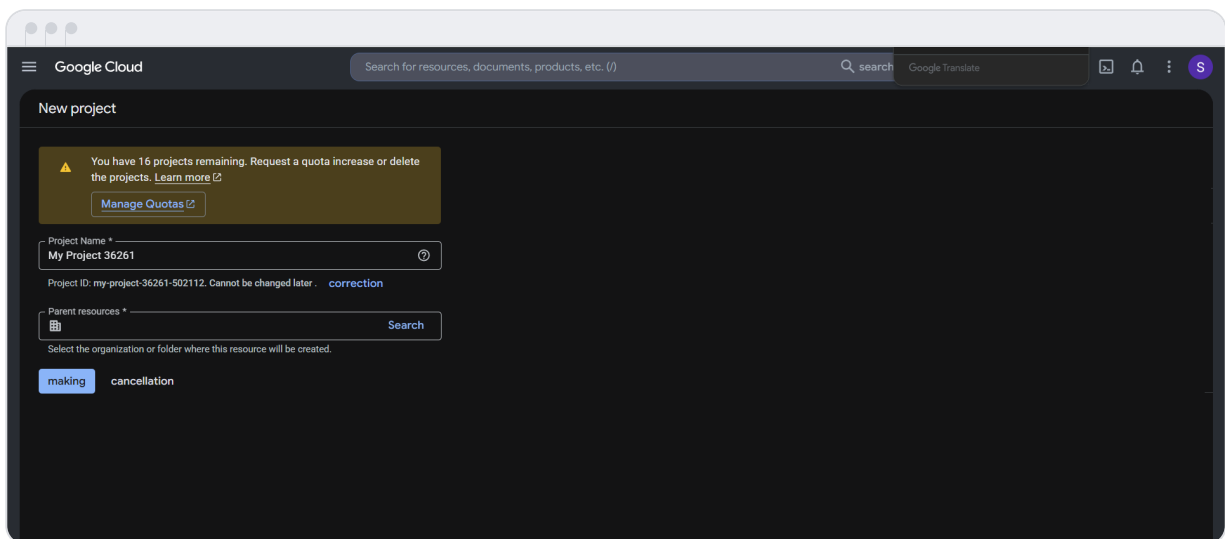

- 01 Creating a Google Project
- 02 Creating a Google Client ID

1 Creating a Google Project

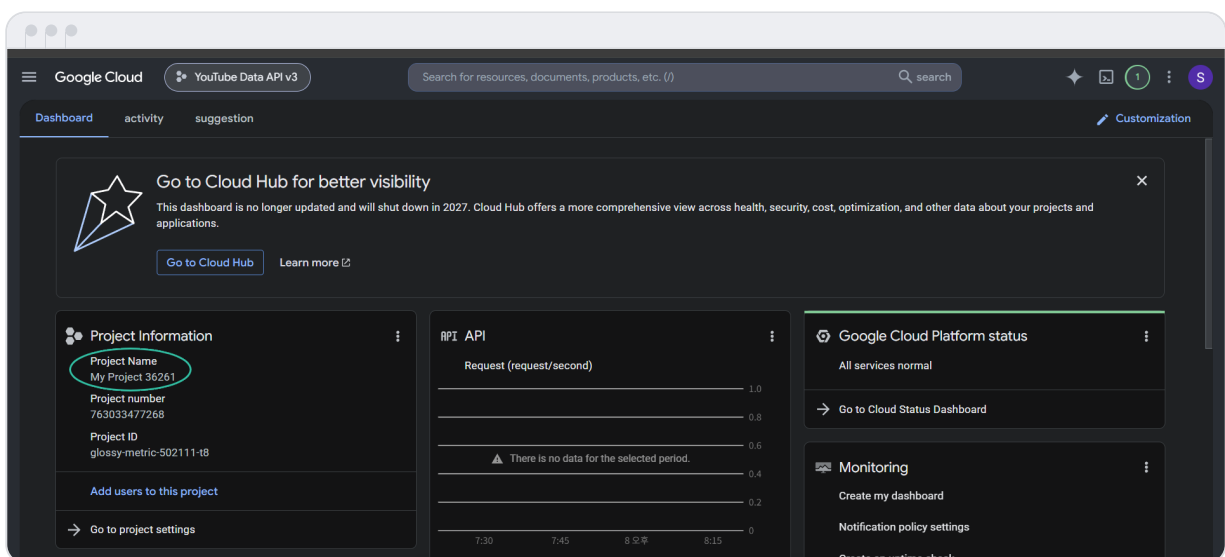

A Google Project is required before you can obtain Google OAuth verification (a Client ID). Follow the steps below.

- 1 Do you already have a Google Project? — No.
- 2 You'll need to create a Google Project first in order to obtain Google OAuth verification (Client ID).
Open the link below and create a new project.

Create a Google Project → <https://console.cloud.google.com/projectcreate>

- 3 Your Google Project has been created.

TIP. Your project name and project ID can always be found later at the top of the Console dashboard.

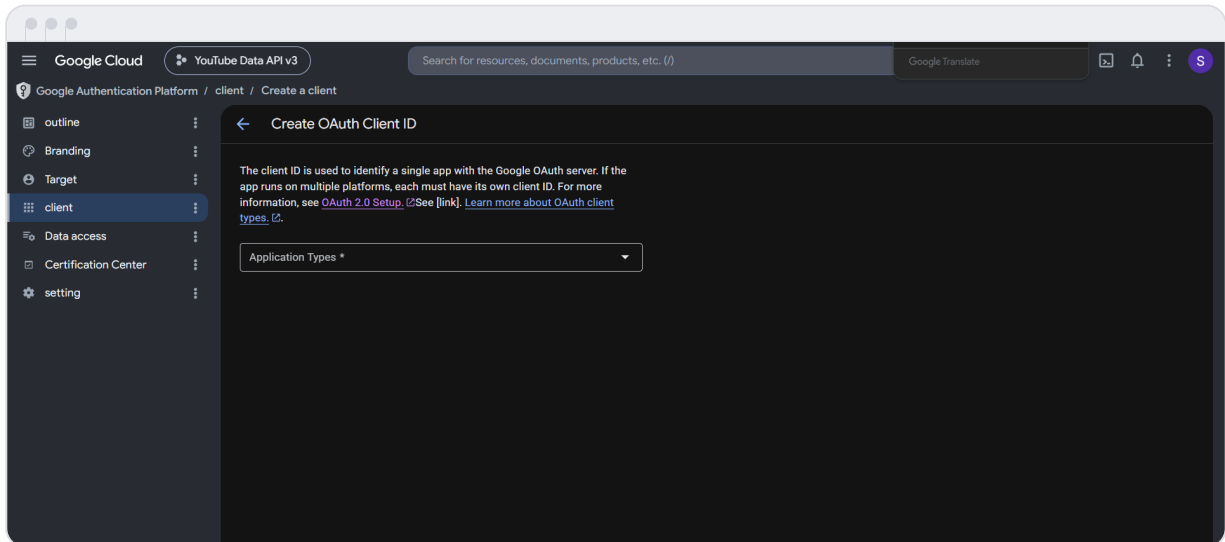

2 Creating a Google Client ID

Once your Google Project is ready, the next step is to issue an OAuth Client ID.

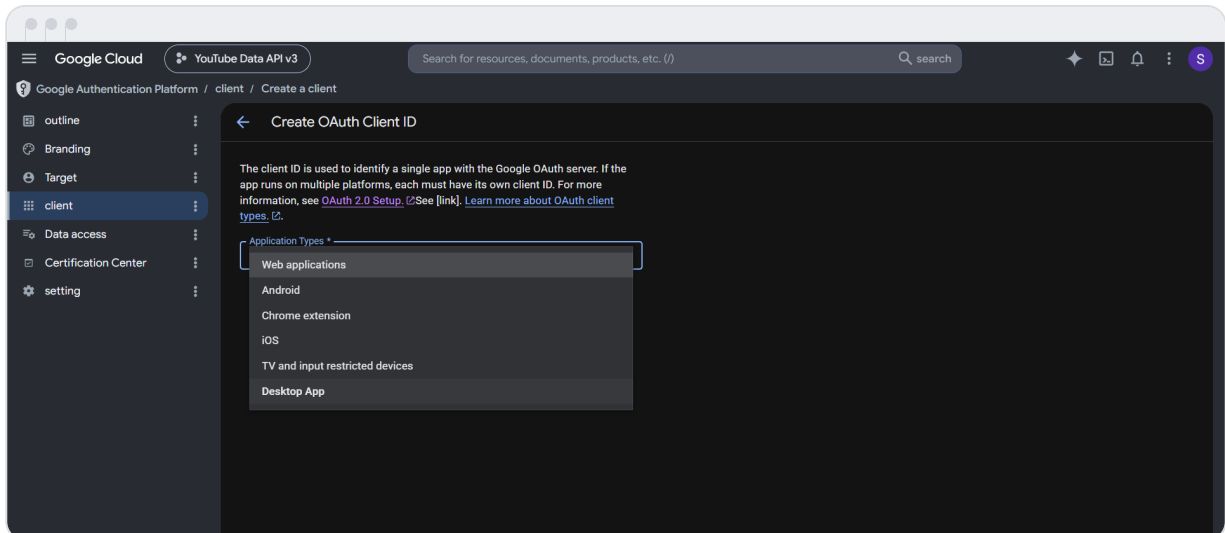

1 Do you already have a Google Project? — Yes.

2 Go to the Create a Google Client page.

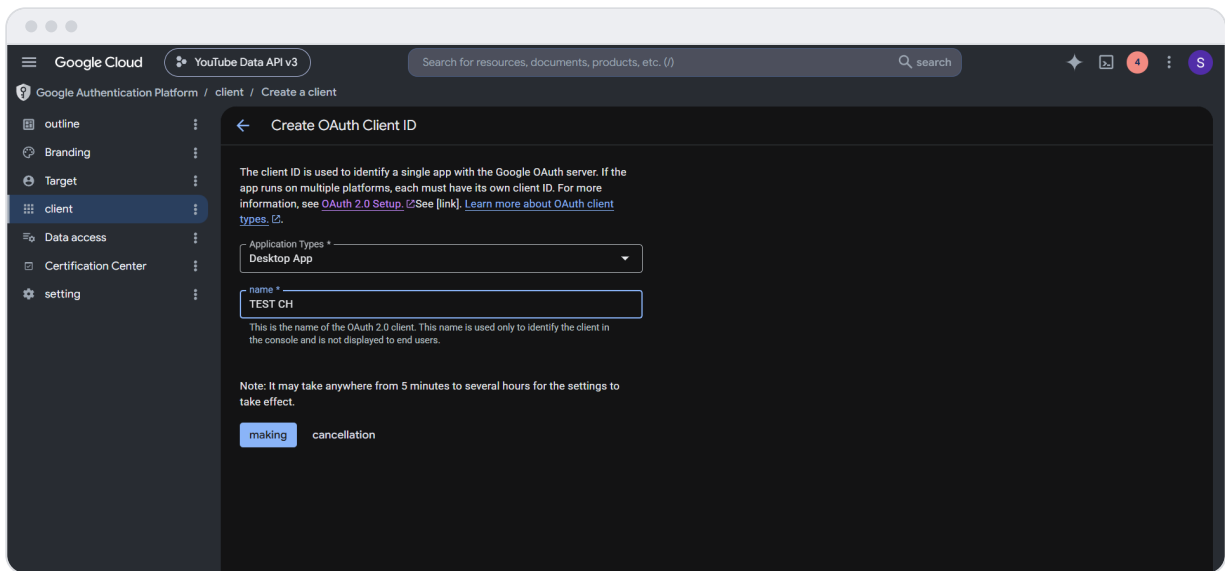

Create a Google Client → <https://console.cloud.google.com/auth/clients/create?project=fourth-cedar-489307-b1>

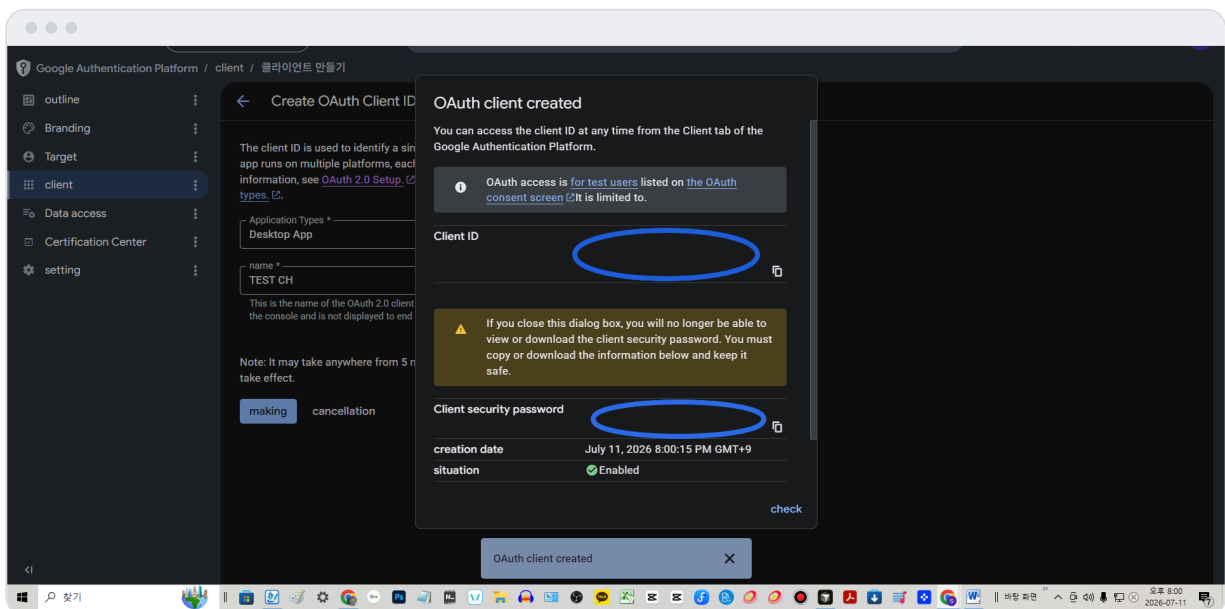

3 Open the "Application Types" dropdown and select "Desktop App."

- 4 Enter any name you like in the "Name" field, then click the "making" button at the bottom.

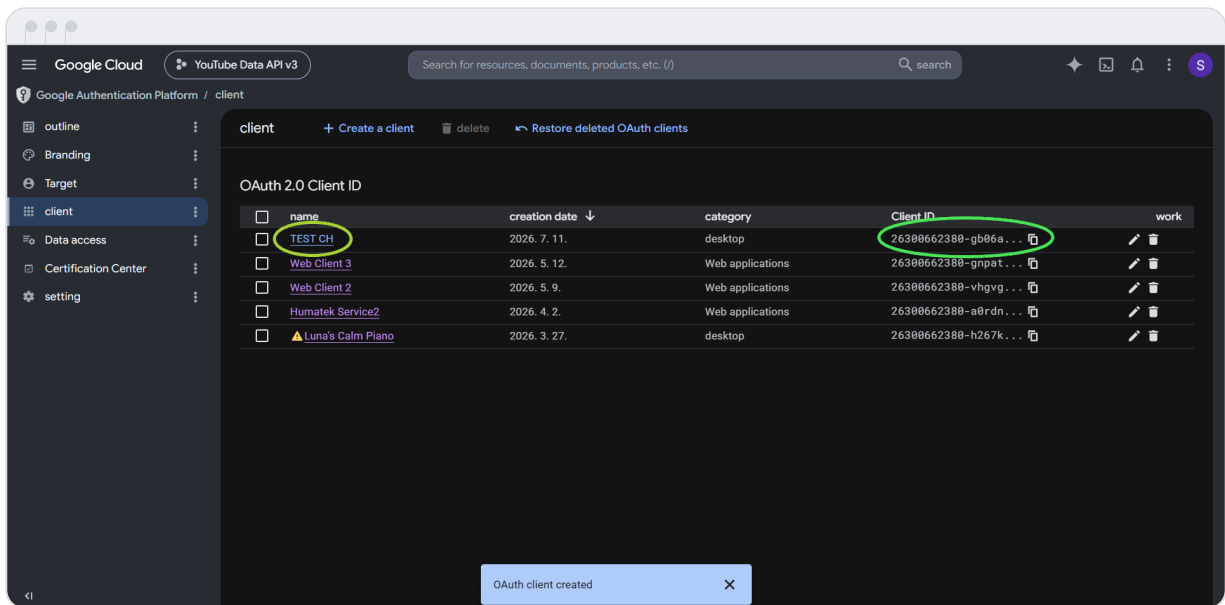

- 5 Your Client ID and Client Secret are generated. Be sure to copy and store both values somewhere safe, then click "check" in the bottom-right corner.

⚠ Once you close this dialog, the Client Secret cannot be viewed again. Make sure you've saved it before continuing.

6 Your Client ID now appears in the list. You're ready to use this Google Client ID in your app.

TIP. The Client ID and Client Secret are used as-is when configuring OAuth login for the YouTube Data API v3. Keep them private and never expose them publicly.
